

Workforce Dimensions

Universal Device Manager

Enabling data flow between Workforce Dimensions devices and applications

Universal Device Manager (UDM) in Workforce Dimensions™ is the device management system of our newest platform. It's a world-class monitoring and management solution for customers ranging from enterprise level to those requiring minimal devices. With UDM, we've taken the core concepts from our previous device management offerings and combined them with innovations that offer your users the freedom and access to manage their work in the ways they need.

UDM is a standalone application that is highly integrated with all Workforce Dimensions applications and workforce management services such as Timekeeping. Universal Device Manager is fully scalable, and the adapter-based platform technology built into UDM allows for quick reaction to acquisitions or third-party device integrations.

Key Benefits

» **CONTROL LABOUR COSTS**

- Automatically apply work and pay rules in device configuration
- Device health is constantly monitored to anticipate problems before they occur

» **MINIMISE COMPLIANCE RISK**

- Centrally enforce regulatory guidelines such as working time regulations, parental leave and sickness absence
- Provide accessibility in accordance with World Wide Web Consortium Accessibility Guidelines (WCAG) 2.0 Level AA

» **IMPROVE WORKFORCE PRODUCTIVITY**

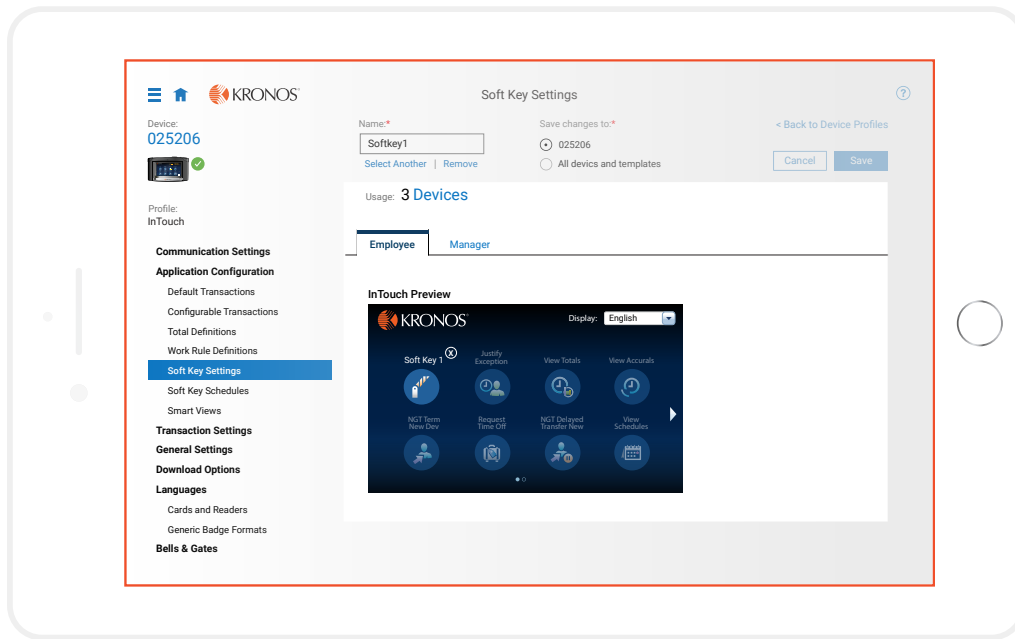

- Device auto registration automatically downloads an assigned configuration when installation is complete
- Users can customise columns in the device management dashboard

» **ENHANCE EMPLOYEE ENGAGEMENT**

- Users can take several actions from one dashboard instead of opening multiple screens
- Red, Yellow, and Green statuses are easy to understand and include description messages

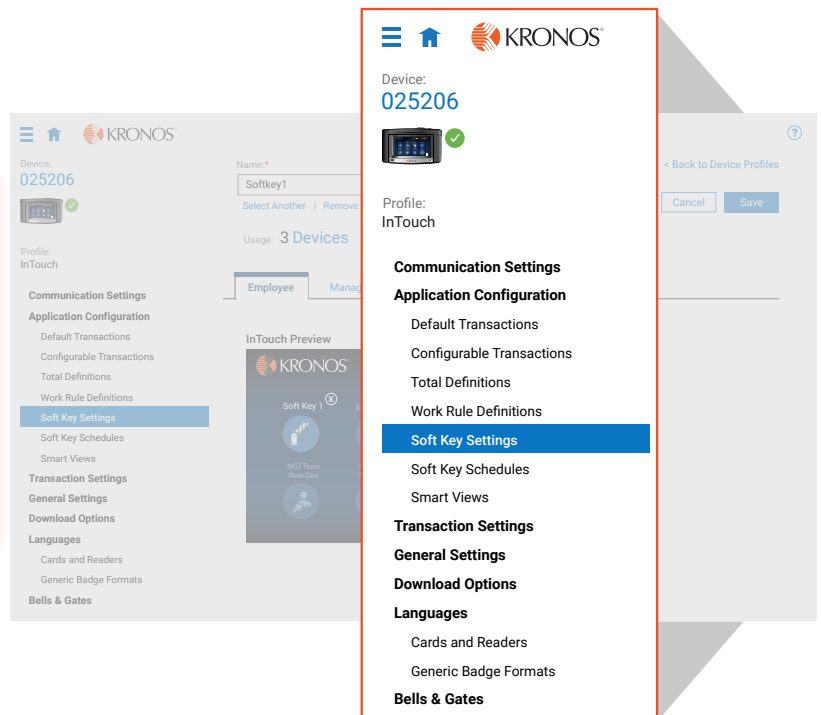

Enhanced monitoring and management

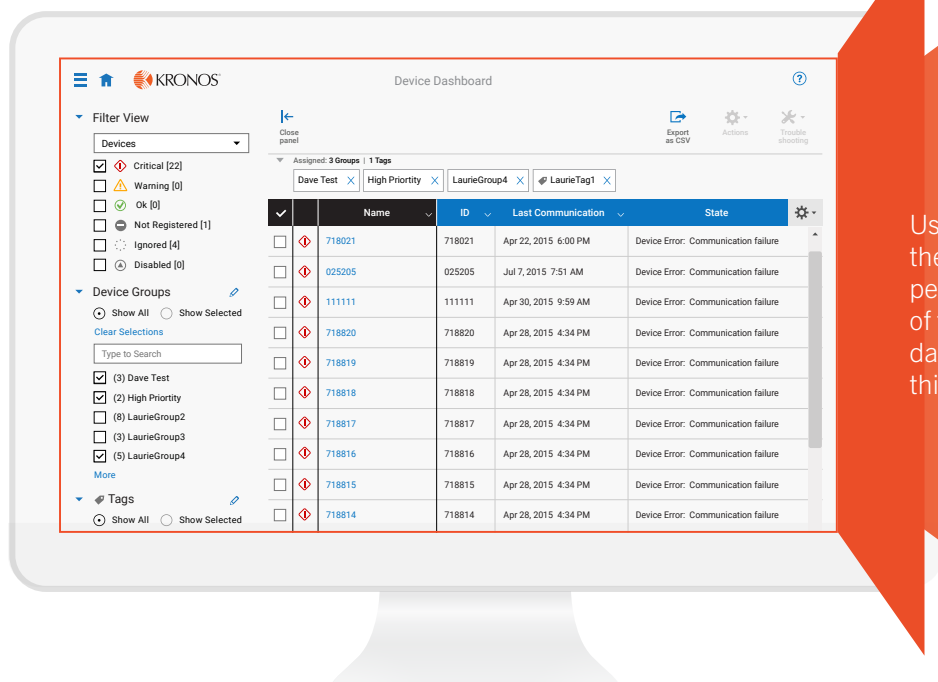

Enjoy fast deployment with enhanced monitoring and management in the UDM. The visualised soft keys on the dashboard eliminate guesswork as to where each key will appear and how the clock layout will look.

Direct access to device settings

UDM provides information on devices using a specific setting or profile and how many of these devices are in a named status and in a named group. Direct access to device settings are embedded throughout the application to give users access to the information they want, where they want it.

Dashboard column personalisation

Users can customise columns in the UDM dashboard. This column personalisation provides individual views of the columns users want to see in the dashboard and the ability to easily export this newly sorted and filtered data.

About Workforce Dimensions

At Kronos, we understand that great businesses are powered by great people, and we recognise the strategic advantage that the workforce can bring to your bottom line. That’s why we developed Workforce Dimensions — a totally new solution that reimagine what’s possible in modern workforce technology. Every dimension — the underlying technology, user experience, functionality, integration, data access, delivery and support — is designed to help you optimise your most valuable resource: Your people.
